Title: Tour De France 2024

Genre: Sports

Style: 3D, Simulation, Realistic

Platform: PC

Market: Cyclists

Elevator Pitch: Making every cycling fans dreams come true.

The Pitch

Introduction

Tour De France 2024 is a cycling game that would allow you to race with your favourite riders that you see on TV and see how you compare to them. Basic idea is that the player would be able to join the ongoing stage and connect their indoor bicycle with the PC and take part in the stage.

Background

This idea came to me when i saw my father watching this years Tour de France on TV while cycling on his stationary bicycle because he wanted to feel like he was part of the race. Inspiration also came from the Zwift cycling game where you can race online with people from all around the world on made up courses.

Game-play and Setting

The main idea is that you would be able to join a ongoing stage of the Tour de France. You would be able to look around and see the riders around in real time. Every rider in the Tour de France has a small computer on his bike that tracks his performance and stats like heart rate, speed, incline level and mainly his power output level measured in watts. Every modern indoor bicycle can measure the users watt output level and simulate going uphill. All of this would be simulated based on the real world data provided by the riders. The game would also take into account things like getting slipstream from the other riders or the real life weight of the player. The game would be very realistic not only in the way it feels to play but also in the way it looks. For example the player should be able to enjoy the view from the top of a mountain after he climbs it.

Figure 1: Gameplay

Features

The main reason why cycling fans from all around the world would want to buy this game is because it would give them a realistic experience of what it feels like to race in the Tour de France and what it takes to win. There's thousands of cyclist that would love to join the race for the last 20km and try and fight for the victory (including my dad :D). Currently there is no game on the market that comes even close to this so there wouldn't be any competition.

Platform

Currently our plan is to release the game for PC and in the future the goal is definitely to add virtual reality to the game.
